

MSBA CHURCH BILLIARDS

CALCULATING MATCH RESULTS IN BILLIARDS

- 1 Add the number of games won and multiply by 2 to determine the Match Points won.
For a drawn game it is 1 match point to each team.

- 2 Calculate the difference between each team's Total Score Points. Should this be an odd number then round **up** to the next even number. Halve this figure and divide by 100. The result is the percentage difference to be **added** to the Match points won by the team with the highest Total points

- 3 Examples: When the difference in score points is 77 then round up to 78
Half the difference to get 39
Divide by 100 to get .39

When the difference in score points is 216
Half the difference to get 108
Divide by 100 to get 1.08

- 4 In the event of an individual walkover 2 match points and 100 score points are awarded to the player receiving the walkover.
On the score sheet note W/O against the name of the player, not the position, receiving the walkover. The team receiving the walkover can elect the player who will not play provided all the other players present play in order of handicap.
(It may be necessary to rewrite the score sheet if the playing order is not clear)

- 5 Should a player have to forfeit, the points on the score board are not counted in calculating the Total Points of both teams. The player receiving the forfeit will be awarded the game and receive 2 Match Points and 100 score points.
